

NOSSAIR SEDKI

Software Engineer – Full-Stack

Computer Engineering graduate (5-year engineering degree, MSc equivalent) with 11 months of professional experience at Groupe Kohler. I design and build full-stack business applications – from REST APIs to production on Azure – including conversational AI integrated into enterprise tools.

EXPERIENCE

Jacob Delafon – Kohler Co. • Tangier, Morocco

KOHLER.

11 months October 2025 – Present

Software Engineer

Scope

- Design and development of internal business applications and digital services, from requirements analysis to production release.

Responsibilities

- Analyze business needs, design the solutions and build the full-stack applications that support them.
- Design and develop REST APIs and backend services; define the application architecture and engineering best practices.
- Integrate Group ecosystem systems and third-party services (SAP, Microsoft Graph) and embed conversational AI into enterprise tools (Microsoft Teams).
- Build and containerize (Docker) cloud-ready solutions deployed on Microsoft Azure.
- Optimize performance: caching, monitoring and structured error handling.
- Deploy continuously through GitHub Actions pipelines and harden quality with Playwright E2E tests (Page Object Model).

*Tech stack: **Node.js, TypeScript, Express, React, Next.js, PostgreSQL, Azure, Docker, GitHub***

Actions, Playwright, SAP

Software Engineer – Final-Year Internship

6 months

February - July 2025

Scope

- Create and build a microservices web application orchestrating the complete audit lifecycle.

Responsibilities

- Develop the React front end and the Spring Boot / Spring Cloud microservices with RabbitMQ asynchronous messaging.
- Secure the APIs (JWT, Spring Security) and deploy to Azure (SQL Server) with Docker containerization.
- Define the test strategy (JUnit 5, Mockito, cross-service integration tests) and automate build, test and deployment through GitHub Actions.
- Digitize a business process previously run in Excel: **-65 %** processing time, human error **-80 %**.

*Tech stack: **React, Spring Boot, Spring Cloud, RabbitMQ, Docker, Azure, JUnit 5, Mockito, JWT,***

Spring Security

Lydec - Casablanca, Morocco

3 months

July - September 2024

Software Engineer – Summer Internship

Scope

- Develop a full-stack HSE mobile application (React Native, Spring Boot) for real-time incident and alert management in an industrial environment.

Responsibilities

- Develop the React Native mobile app and the Spring Boot backend with asynchronous processing.
- Architect secure REST APIs (JWT, Spring Security) and harden real-time data flows.
- Implement automated tests (JUnit, Mockito) and the CI/CD pipeline (GitHub Actions, Docker); validate on physical devices and emulators.

*Tech stack: **React Native, Spring Boot, JWT, Spring Security, GitHub Actions, Docker, JUnit, Mockito***

PROJECTS

Meta Ads Report Studio – advertising reporting platform - 2026

[GitHub Repository](#)

- Create and build a web application for marketing agencies and advertisers running several ad accounts: Meta Marketing API connection, consolidated dashboard and one-click PDF client report export.
- Automate reporting that was previously assembled by hand: multi-account consolidation and report generation in seconds instead of hours.
- Design the architecture and data model (Next.js, TypeScript, PostgreSQL / Prisma): OAuth 2.0 authentication, access-token encryption and resilient handling of third-party API errors and rate limits.
- Industrialize delivery: GitHub Actions CI/CD pipeline (lint, type-check, automated test suite, build) and Docker containerization – every change validated automatically before deployment.
- Stack: **Next.js, React, TypeScript, PostgreSQL, Prisma, Docker, GitHub Actions, Vitest**

Urban Services Platform

- Create and build a full-stack platform (**Spring Boot, React, PostgreSQL, JWT**) centralizing the management of complaints, bookings and sports facilities
 - Write and run functional and integration tests covering the critical workflows (bookings, complaint handling, facility availability)
 - Audit the existing business processes and re-engineer the digital flows to align services with strategic priorities
 - Optimize the user interface and harden backend processing, improving operational efficiency by 30%
-

TECHNICAL SKILLS

Languages

TypeScript, JavaScript, Java, Python, SQL

Tools & APIs

Postman, Swagger / OpenAPI, Git

Architecture

Clean Architecture, design patterns, SOLID

Automated testing

JUnit 5, Mockito, Vitest, Playwright, Supertest

Methodologies

Jira, Agile / Scrum, TDD, code reviews

Databases

PostgreSQL, SQL Server, Prisma, migrations

CI/CD & containers

GitHub Actions, Docker, Git / GitFlow, Linux

Backend & APIs

Node.js, Express, Spring Boot, REST

Frontend

React, Next.js, Tailwind CSS, React Native

Security

JWT, OAuth 2.0, Spring Security

Cloud & DevOps

Azure (App Service, Azure SQL, Azure DevOps)

Performance & observability

Profiling, cache, monitoring, logs

Quality

Test Pyramid, shift-left, Definition of Done

Integration & AI

Graph API, Copilot Studio, SAP

Messaging & async

RabbitMQ, asynchronous processing

TRAINING & CERTIFICATIONS

Azure Fundamentals AZ-900 (Microsoft Azure)	In progress	Building Scalable Java Microservices with Spring Boot and Spring Cloud.	Coursera
Clean Architecture: Designing testable code	Udemy	Scrum Certification	Udemy

EDUCATION

State Engineer’s Degree in Computer Engineering (5-year program, MSc equivalent) École Nationale des Sciences Appliquées – Tétouan, Morocco · 2020 – 2025 · Highest honours	
High School Diploma – Physical Sciences Highest honours	Lycée El Kindi · Casablanca · 2020

STRENGTHS

- Ownership and autonomy: take a feature from requirement to production - Analytical mindset, rigor and attention to detail - Clear communication and effective collaboration in Agile teams - Fast ramp-up on new environments and tech stacks

LANGUAGES

Arabic: Native	French : Advanced	English : Professional working proficiency
----------------	-------------------	--
